## **VIKANE Gas Fumigant... Safe & Effective Pest Control**

**VIKANE** Gas Fumigant is specifically designed to control a number of pests which include: drywood termites, lyctus (power post) beetles, old house borers, death watch beetles, bed bugs, clothes moths, German cockroaches, carpet beetles, rats, mice, and the nymphs and adults of oriental, American and brown-banded cockroaches. Although it is a highly effective, toxic fumigant to the insect, hazards to the fumigator can be minimized by proper handling and application procedures.

**VIKANE** Gas Fumigant has outstanding dispersion and penetration properties, which permit it to infiltrate hard to reach locations such as termite galleries and destroy the insects.

**VIKANE** Gas Fumigant imparts no odor to any known household materials. It causes no corrosion when properly used at correct rates.

It's easy to use. Furniture and rugs may remain in place during fumigation – only people, pets (including fish), domestic animals, plants and food not sealed according to label instructions must be removed. Most structures are ready for occupancy within one or two hours after they're opened following exposure.
